Apex Systems - RFP Response: Core Platform Modernisation

Submission date: 2026-01-12. Contact: bids@apexsystems.example

1. Technical Capability

Apex proposes a cloud-native architecture on Kubernetes across three availability zones.

All integrations are delivered as versioned REST APIs with an event bus for batch loads.

The platform scales horizontally to 12,000 concurrent users with per-service autoscaling.

Our disaster recovery design provides a 15-minute RPO and a 1-hour RTO with auto failover.

Disaster recovery is tested quarterly and results are published to the client steering group.

2. Implementation Plan

Delivery runs over 16 weeks across four milestones, with a named lead and six engineers.

Milestone gates cover discovery, build, integration testing and go-live readiness review.

A documented rollback plan restores the previous release within 30 minutes at any gate.

3. Commercial Value

Fixed implementation fee: $240,000 covering design, build, migration and go-live support.

Annual support cost: $36,000 per year for three years, with no indexation applied.

Total three-year cost of ownership: $348,000. All assumptions are listed in Appendix B.

4. Security and Compliance

Apex holds ISO 27001 certification, renewed March 2026, and SOC 2 Type II attestation.

Data is encrypted in transit with TLS 1.3 and at rest with AES-256 customer-managed keys.

Immutable audit logs capture every privileged action and are retained for seven years.

Annual penetration testing is performed by an external CREST-accredited assessor.

5. Support and Experience

Support is 24x7 with a 1-hour response for critical incidents and a 99.9% availability SLA.

Apex has delivered 14 comparable modernisation programmes in regulated sectors since 2019.

Three client references are available, including two public-sector organisations.
