BrightPath Tech - RFP Response: Platform Delivery Proposal

Submission date: 2026-01-09. Contact: proposals@brightpath.example

1. Technical Capability

BrightPath delivers a containerised microservices platform hosted on managed infrastructure.

Integration is provided through REST endpoints and nightly scheduled file transfers.

The design supports 4,000 concurrent users; load beyond that requires a commercial review.

Nightly backup and restore procedures are documented, with a 24-hour recovery objective.

2. Implementation Plan

Delivery is phased over 12 weeks with three milestones and a shared delivery manager.

Testing covers unit, integration and user acceptance stages before each release gate.

Rollback is handled by redeploying the prior container image, typically within two hours.

3. Commercial Value

Fixed implementation fee: $155,000, the lowest total cost offered in this submission.

Annual support cost: $22,000 per year, fixed for the first two years of operation.

Total three-year cost of ownership: $221,000, itemised by workstream in Appendix A.

4. Security and Compliance

BrightPath is not currently ISO 27001 certified; certification is targeted for late 2027.

Data is encrypted in transit using TLS 1.2 and at rest using provider-managed encryption.

Application logs are retained for 90 days; privileged action audit logging is not itemised.

5. Support and Experience

Support operates business hours with a 4-hour response target for critical incidents.

BrightPath has completed five comparable platform deliveries, primarily in retail.

Two client references are available on request.
