NexaWorks - RFP Response: Secure Platform Programme

Submission date: 2026-01-15. Contact: tenders@nexaworks.example

1. Technical Capability

NexaWorks proposes a hybrid deployment with a private cloud control plane and public edge.

Integrations use a documented REST API gateway with mutual TLS between all services.

Capacity planning targets 8,000 concurrent users, validated by load testing evidence.

A disaster recovery runbook exists with a 4-hour RTO; failover is operator-initiated.

2. Implementation Plan

Delivery spans 20 weeks across five milestones, with a governance board meeting fortnightly.

Staffing is confirmed for discovery and build; later phases are resourced on demand.

Rollback procedures are described at programme level but not per milestone.

3. Commercial Value

Pricing is indicative only at this stage and will be confirmed after discovery.

An implementation range of $180,000 to $260,000 is offered, subject to final scope.

Annual support cost has not been fixed and will be proposed in the contract schedule.

4. Security and Compliance

NexaWorks holds ISO 27001 and ISO 27017 certification and is audited annually.

All data is encrypted with AES-256 at rest and TLS 1.3 in transit, with HSM-backed keys.

Immutable audit logs are retained for ten years and are exportable to client SIEM tooling.

The platform is assessed under a formal information security management system.

Quarterly penetration tests and continuous vulnerability scanning are included.

5. Support and Experience

Support is 24x7 for security incidents and business hours for standard service requests.

NexaWorks has delivered nine programmes in financial services and healthcare.
