NexaWorks — Supplier RFP Response

Fictional classroom sample — not a real supplier proposal

Balanced proposal with the strongest implementation plan and support model.

1. Executive Summary and Technical Capability

Provides a modular application design, documented APIs, integration testing, monitoring, and capacity planning for expected growth. Some detailed performance benchmarks are deferred until discovery.

The supplier understands the requirement to deliver a maintainable solution, integrate with existing systems, and support operational growth. All claims should be validated during due diligence.

2. Implementation Plan

Delivery plan is 12 weeks with weekly milestones, a dedicated project manager, technical lead, QA engineer, and change-management support. Includes discovery, prototypes, staged migration, user acceptance testing, training, and rollback rehearsals.

Dependencies include timely access to business stakeholders, test environments, and approved interface documentation. Final dates depend on discovery and acceptance of the project plan.

3. Commercial, Security, Support and Experience

Commercial proposal: Implementation fee: $190,000. Annual support: $24,000. Pricing lists delivery assumptions, training, migration, testing, and a 10% contingency. Third-party cloud usage is billed at cost.

Security and compliance: Includes encryption, least-privilege access, audit trails, vulnerability scanning, incident management, and a documented privacy review. Claims a security management process aligned with ISO 27001 but does not claim current certification.

Support and experience: Offers 24/7 critical incident intake, a 30-minute initial response target for severity-one incidents, monthly service reports, quarterly reviews, and three relevant project references with measurable outcomes.

This fictional proposal is intentionally designed with strengths, limitations, and unanswered questions to support a classroom evaluation exercise.
