Orbit Digital — Supplier RFP Response

Fictional classroom sample — not a real supplier proposal

Strong supplier experience and references with a vague integration plan and medium pricing.

1. Executive Summary and Technical Capability

Highlights a mature platform and broad feature set with cloud hosting and reporting. Integration is described as achievable using standard connectors, but the proposal does not list exact interfaces, dependencies, or detailed API mappings.

The supplier understands the requirement to deliver a maintainable solution, integrate with existing systems, and support operational growth. All claims should be validated during due diligence.

2. Implementation Plan

Estimated delivery is 14 weeks. An experienced delivery manager is named, and governance meetings are scheduled. The proposal lacks a detailed resource allocation table and does not explain the migration rollback approach.

Dependencies include timely access to business stakeholders, test environments, and approved interface documentation. Final dates depend on discovery and acceptance of the project plan.

3. Commercial, Security, Support and Experience

Commercial proposal: Implementation fee: $180,000. Annual support: $32,000. Includes core configuration and training. Data cleansing and custom connectors may incur additional charges after technical discovery.

Security and compliance: Describes encryption, role-based access, audit logging, and annual security reviews. It references a security certification held by its hosting partner, but the supplier's own certification scope is unclear.

Support and experience: Provides 24/7 support with a 1-hour critical incident response target. Lists five relevant projects, two named customer references, and experience serving organizations of comparable size.

This fictional proposal is intentionally designed with strengths, limitations, and unanswered questions to support a classroom evaluation exercise.
